

Stan Davis Named One of *Federal Computer Week's* 2006 Federal 100 Award Winners

Award recognizes professionals making outstanding contributions to the government IT community

Newport News, VA, February 2, 2006 - The Army Distributed Learning System today announced that Stan Davis, Project Officer for Army e-Learning, has been named one of *Federal Computer Week's* annual Federal 100 Award winners. The awards are presented to public and private sector information technology professionals who made a difference in the way agencies and companies develop, acquire, manage and use information technology.

Davis oversees Army e-Learning, the latest component of the Army's Distributed Learning System, under the Program Executive Office Enterprise Information Systems (PEO EIS). In support of the Army's transformation to a new strategic focus on readiness, Davis directs a program that provides essential Web-based training courses to 1.4 million Army uniformed and civilian personnel worldwide. The online curriculum is accessible 24 hours a day, seven days a week and includes 2,600 courses in the areas of information technology, business, leadership, professional development and foreign language. Davis is responsible for ensuring that Army e-Learning meets directives issued by the Army's Chief Information Officer (CIO) regarding technology-training requirements.

Davis was recognized for the way he strengthened Army e-Learning by making information technology training universally available to the Army and ensuring it met or exceeded quality levels of comparable instructor-lead training courses. He also delivered significant cost savings to the Army by guiding it toward Web-based training and away from classroom training.

Davis will be featured in the March 20 issue of *Federal Computer Week* magazine and at a black-tie gala held Monday, March 20 at the Ritz-Carlton in McLean, Virginia.
